Fentanyl Facts for Students

Fentanyl is a synthetic, highly addictive opioid prescription drug used to treat severe pain. This prescription drug usually comes in the form of a slow release patch. But now illegal non-prescription powdered Fentanyl is being laced in other opioids and illegal street drugs.

Fentanyl is **100X** more toxic than Morphine

Morphine

Fentanyl

// Facts and Stats //

╞╿╪╿╪╿╪╿╪╿**┊**╿

676 is the total number of people who died of opioid related causes in 2014, in Ontario. Far more than Motor vehicle collisions deaths of that same year 481.*

A small amount is DEADLY (as little as 1 or 2 grains of salt)

It is being added to illegal street drugs and party drugs

// if you choose to use... **REDUCE YOUR RISK**
