
2018-2019 Community Influenza Surveillance Report Update of Current Status March 27th, 2019

Overall Assessment

Influenza continues to circulate in the Middlesex-London region, with cases being reported across the City of London and Middlesex County.

Analysis and Action

The influenza season continues in the Middlesex-London region and elsewhere in Ontario. Regardless of the level of local influenza activity, there are a number of easy-to-follow steps that residents can take to avoid becoming sick throughout the year. While washing your hands with soap and warm water, or using an alcohol-based hand sanitizer, remain effective ways of preventing many illnesses, including influenza, local residents should also cover their coughs and sneezes, clean and disinfect high-touch surfaces frequently, and stay home when they feel sick.

Details of Current Local Activity

Between March 17th and March 23rd, there were 27 laboratory-confirmed cases of influenza A reported to the Health Unit, among whom there were 16 hospitalizations. The Health Unit was also notified of the death of three cases who were previously reported.

Since September 1, 2018, there have been 409 laboratory-confirmed influenza A cases and three cases of influenza B reported to the Health Unit. Among these cases there have been 207 hospitalizations and 17 deaths. Over this time period there have also been 29 influenza A outbreaks declared in hospitals, long-term care facilities, and retirement homes.

Appendix A provides additional details about laboratory-based influenza activity indicators for the current reporting week, as well as other local indicators of respiratory illness. A graph showing all 412 laboratory-confirmed cases by week of illness onset is provided at the end of this report in Appendix B.

Provincial and National Comparison

In this week's *Ontario Respiratory Pathogen Bulletin*, Public Health Ontario states that influenza activity across the province was similar when compared to what had been reported the previous week. Influenza A activity across Ontario is moderate, while influenza B activity remains low. Among the influenza A specimens that have been subtyped this season, 67.8% have been the A(H1N1)pdm09 strain.

In this week's *FluWatch*, the Public Health Agency of Canada reports that to date this season, the most common influenza virus identified is influenza A, with 83% of subtyped specimens being the A(H1N1)pdm09 strain. However, influenza A(H3N2) cases have been increasing since January, and accounted for nearly one-third (64%) of influenza A samples reported in the most recent week. The majority (84%) of influenza A(H1N1)pdm09 cases have been among those under the age of 65 years, while 59% of all influenza A(H3N2) cases have been among those 65 years of age and over.

Appendix A

Summary of Community Influenza Surveillance Indicators for Middlesex-London March 17th to March 23rd, 2019

Table 1: Summary of laboratory-based influenza activity indicators, Middlesex-London and Ontario, 2018-2019 influenza surveillance season

Indicator	Reporting Period	Number Reported: <i>Current Reporting Period</i>	Number Reported: <i>Year to Date (from September 1, 2018)</i>	Recent Trends
Laboratory-confirmed cases ^{1, 4}	Mar. 17-23 (week 12) ²	Influenza A – 27 cases Influenza B – 0 cases	Influenza A – 409 cases Influenza B – 3 cases	Influenza A: Lower than the previous week (Mar. 10-16) when 40 cases were reported. Influenza B: Lower than the previous week (Mar. 10-16) when two cases were reported.
Influenza sub-types ¹	Mar. 17-23	Influenza A (H3) – 4 cases Influenza A (H1N1)pdm09 – 0 cases Influenza A not yet subtyped – 23 cases Influenza B not yet subtyped – 0 cases	Influenza A (H3) – 27 cases Influenza A (H1N1)pdm09 – 53 cases Influenza A not yet subtyped – 329 cases Influenza B not yet subtyped – 3 cases	
Hospitalizations ^{1, 5}	Mar. 17-23	16	207	Lower than the previous week (Mar. 10-16) when 18 hospitalizations were reported.
Deaths ^{1, 5}	Mar. 17-23	3	17	Higher than the previous week (Mar. 10-16) when one death was reported.
Influenza outbreaks in long-term care homes/retirement homes/acute care	Mar. 17-23	Influenza A – 2 outbreaks Influenza B – 0 outbreaks	Influenza A – 29 outbreaks Influenza B – 0 outbreaks	Influenza A: Lower than the previous week (Mar. 10-16) when six outbreaks were reported. Influenza B: Same as the previous week (Mar. 10-16) when no outbreaks were reported.
Percentage of samples that are positive for influenza (Ontario) ³	Mar. 10-16 (week 11) ²	Influenza A – 15.0% positivity Influenza B – 0.7% positivity	N/A	Influenza A: Similar to 15.3% positivity reported the previous week (Mar. 3-9). Influenza B: Similar to 0.6% positivity reported the previous week (Mar. 3-9).

Notes:

1 Numbers are subject to change week by week due to the retrospective nature of reporting.

2 Weekly influenza monitoring often uses numbered weeks from 1 to 52 weeks per year. A reference week calendar can be found at <https://www.canada.ca/en/public-health/services/diseases/flu-influenza/influenza-surveillance/fluwatch-weeks-calendar.html>

3 Public Health Ontario, Ontario Respiratory Pathogen Bulletin 2018-2019

4 The week cases are reported to the Health Unit may not be the same as week of illness onset.

5 The week hospitalizations and deaths are reported to the Health Unit may not be the same as the week in which they occurred, or the same as the week of illness onset.

Table 2: Summary of community-based respiratory illness indicators, Middlesex-London, 2018-2019 influenza surveillance season

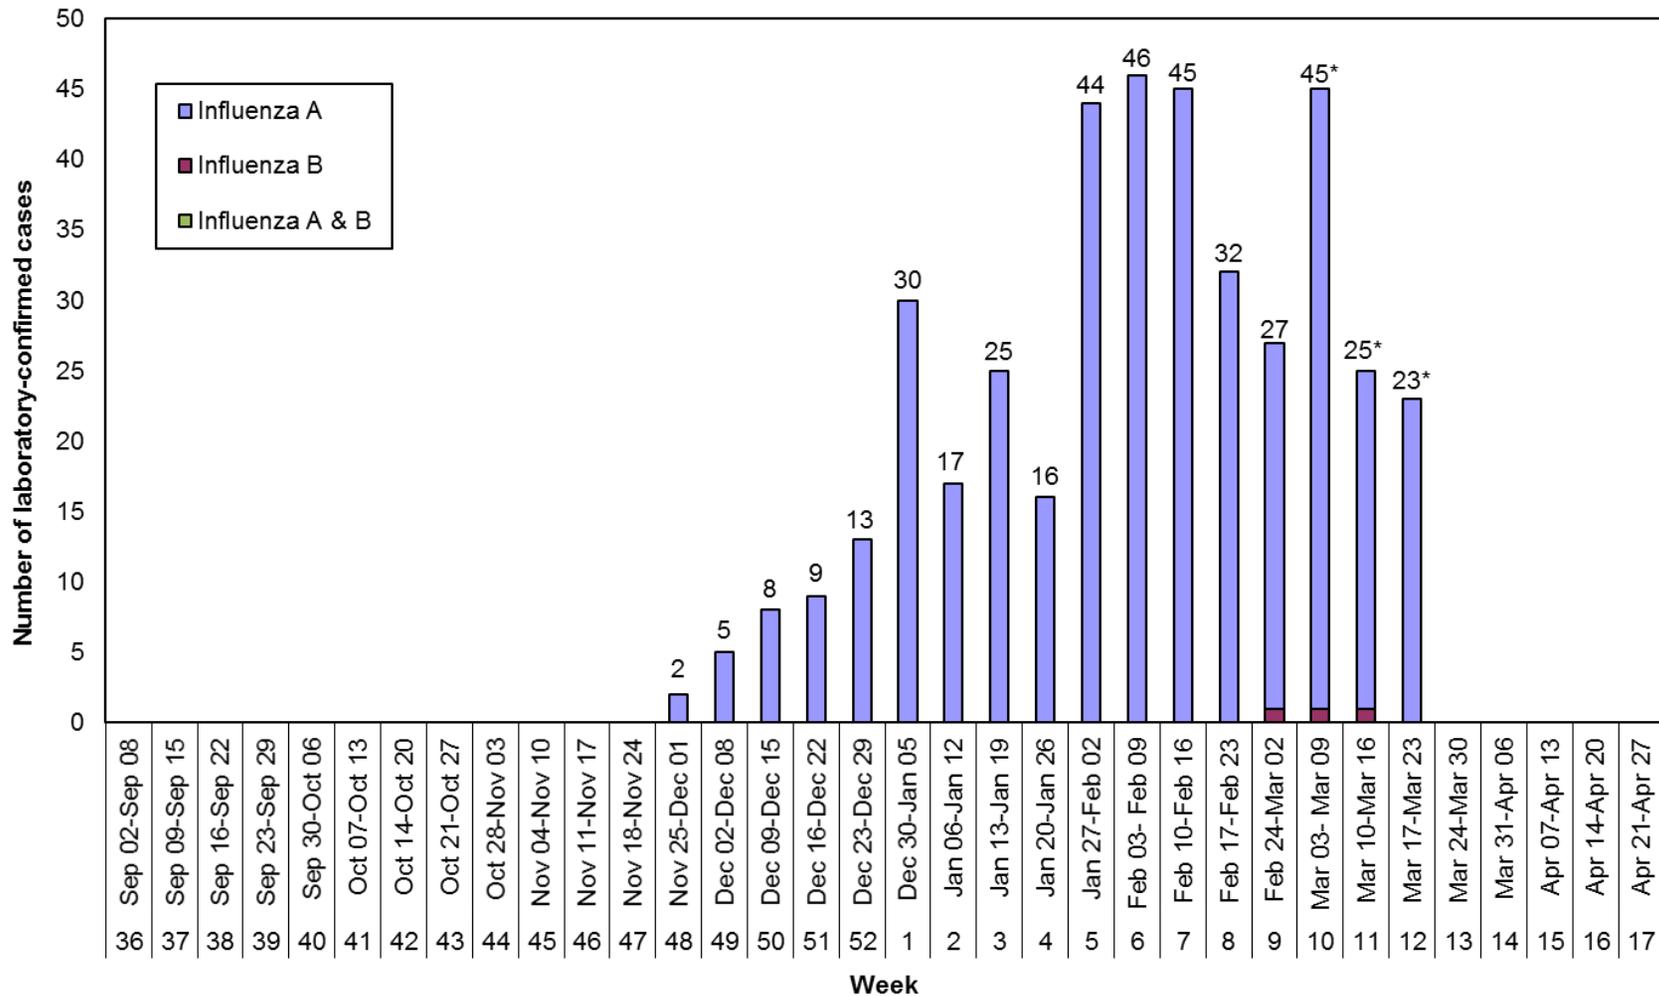

Indicator	Reporting Period	Number Reported: <i>Current Reporting Period</i>	Recent Trends
Hospital emergency room reports regarding the percentage of patients with fever and respiratory illness	Mar. 17-23	<p>An average of 7.3% of patients presented with fever and respiratory symptoms.</p> <p>The proportion was highest at the pediatric emergency department, where 18.3% of patients presented with a fever and respiratory symptoms.</p>	<p>Lower than 8.2% reported the previous week (Mar. 10-16).</p> <p>Lower than 24.9% reported the previous week (Mar. 10-16).</p>
Absence reports from elementary schools (i.e., absenteeism > 10%)	Mar. 18-22	Twenty-one elementary schools from one school board reported average absenteeism (due to all causes) exceeding 10%.	Recent trend information is not available due to March Break.
