

2016-2017 Community Influenza Surveillance Report Update of Current Status May 2, 2017

Overall assessment

Influenza activity in Middlesex-London remains low, with most indicators lower compared to the previous week.

Current Local Activity

Between April 23rd and 29th, there were four cases of laboratory-confirmed influenza B reported to the Middlesex-London Health Unit, as well as three hospitalizations and a facility outbreak.

Since September 1st, 2016, 473 laboratory-confirmed cases of influenza have been reported. To date, 41 cases have been identified as influenza B; all other cases have been identified as influenza A. Of the 113 influenza A cases that have been subtyped, 112 have been identified as influenza A(H3), and one has been identified as an influenza A(H3) and influenza A(H1N1)pdm09 co-infection. There have been 34 influenza A, four influenza B, and one influenza A and B outbreaks declared in facilities located in the Middlesex-London area, as well as 256 hospitalizations and 16 deaths.

Appendix A provides more details about laboratory-based influenza activity indicators, as well as other local indicators of respiratory illness. A graph showing all 473 laboratory-confirmed cases by week is provided at the end of this report in Appendix B. Appendix C provides a graph showing all institutional influenza outbreaks by week and institution type.
